# 1. Getting Started

## 1.1 Introduction

This chapter describes the features of the SR5600 Ring Scanner and explains how to install and charge the battery, capture data and reset the SR5600.

## 1.2 Unpacking

Carefully remove all protective material from around the equipment and save the shipping container for later storage and shipping.

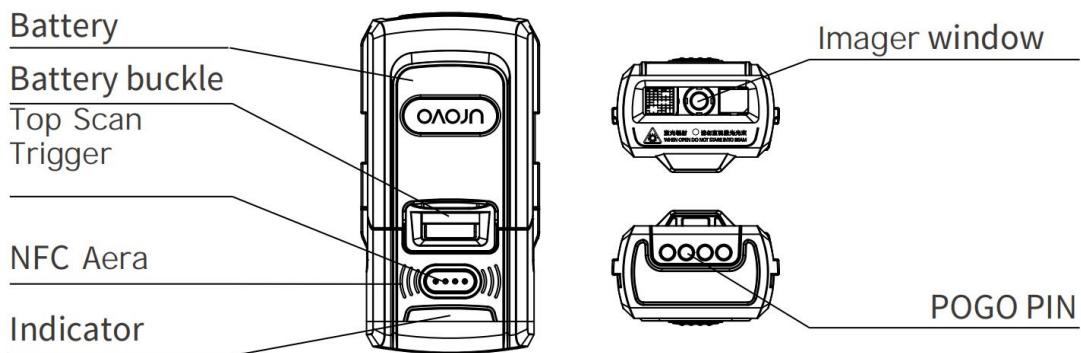

After opening the shipping box, inspect the contents. You should have received the following:

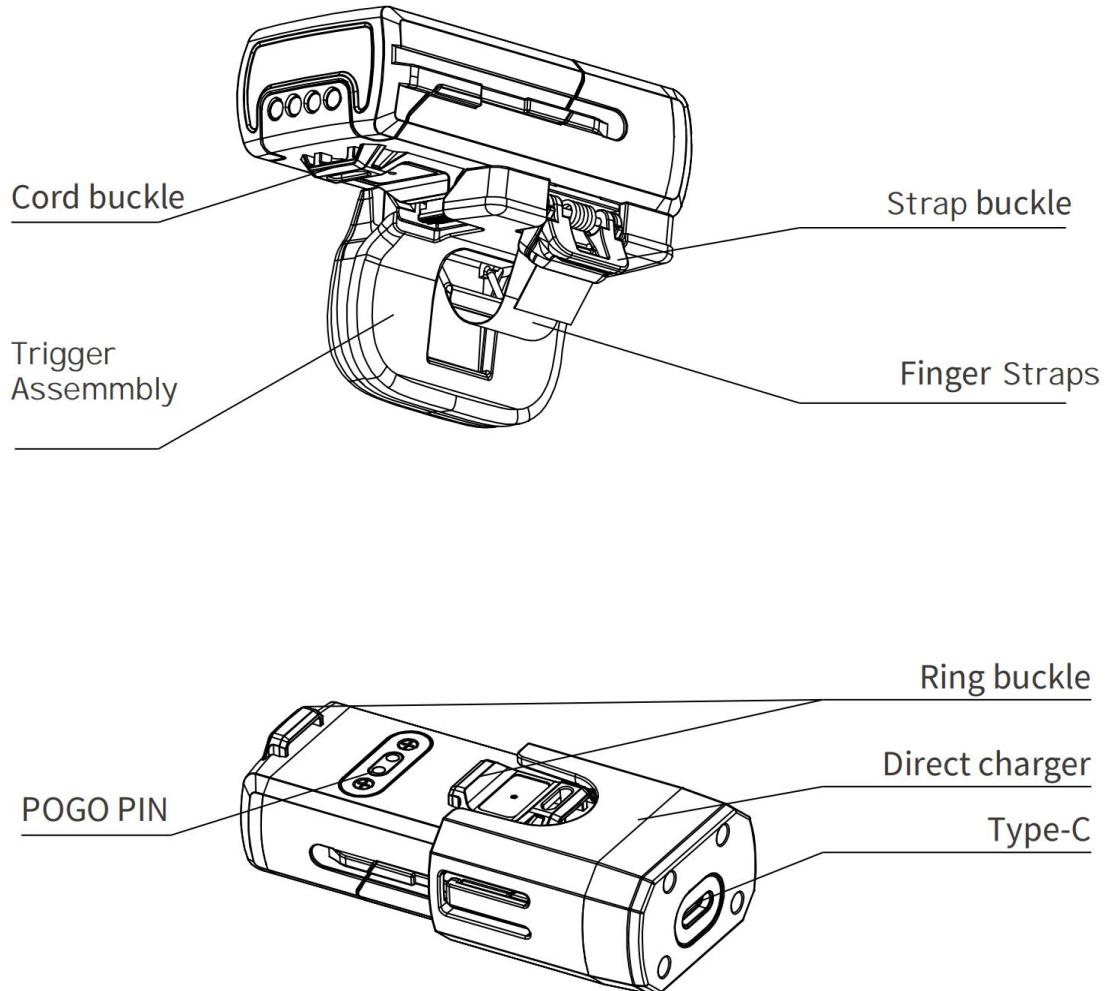

- SR5600
- Battery
- Simple Operation Guide
- USB Cable
- Power adaptor
- Direct Charger

Inspect the equipment for damage. If you are missing any equipment or if you find any damaged equipment, contact Support immediately. See Website: <http://en.urovo.com> or local agent.

## 1.3 Configuration Features

**Figure 1 SR5600 Trigger Configuration Features**

## 1.4 LED Status Indications

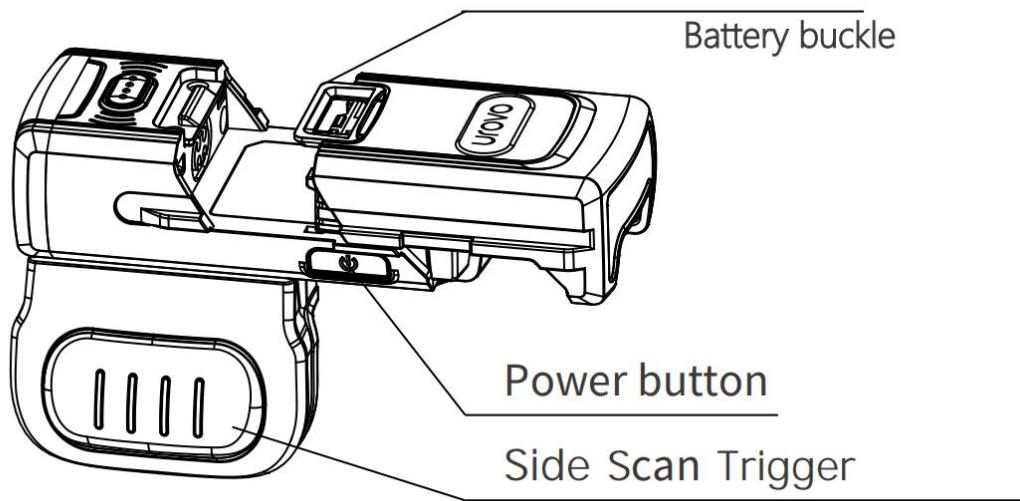

Status light	Description
Red indicator light is always on	Trigger button hold or charging
Red indicator light flashes once	Setup failure
Red indicator blinking twice	Alarming/Scanning when Bluetooth is not connected
Green indicator light flashes once	Scan bar code successfully
Green indicator light is always on	Battery fully charged
Blue indicator light keeps flashing	Bluetooth enters pairing mode
Blue indicator solid on	Successful Bluetooth connection

## 1.5 Buzzer, vibration status

Buzzer, vibration status	Description
Start-up sound + no vibration	Startup
One long buzz + vibration	Shutdown
One short buzz + vibration	Successful decoding
Two short buzz + no vibration	The battery is set successfully, the Bluetooth is connected successfully, and the Bluetooth is disconnected
One long buzz + no vibration	Setup failure
Four short beeps + vibration	Alarming/Scanning when Bluetooth is not connected

## 1.6 Battery installation instructions

Align the battery with the top of the SR5600 and insert it into the battery compartment. Slide the battery all the way into the SR5600 locking slot to ensure that the battery matches with SR5600.

## 1.7 Trigger Assembly

### 1.7.1 Installation instructions

Align one end of the SR5600 lock catch and push the other end down until it clicks into place.

The trigger assembly can be installed as required. The following figure 1 is for the right finger, and figure 2 is for the left finger. Press the sliding buckle to remove the ring.

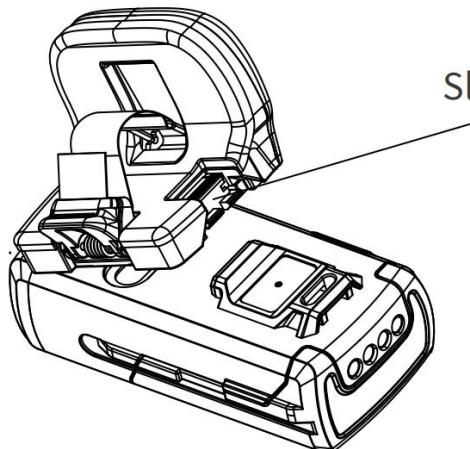

Figure1

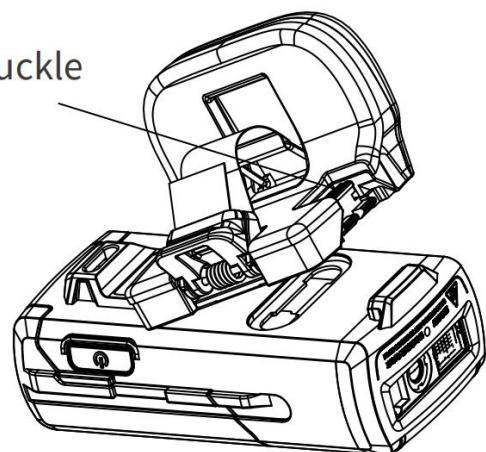

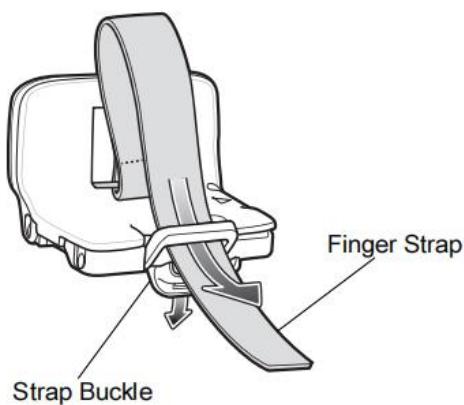

Figure2

### 1.7.2 Adjust finger strap

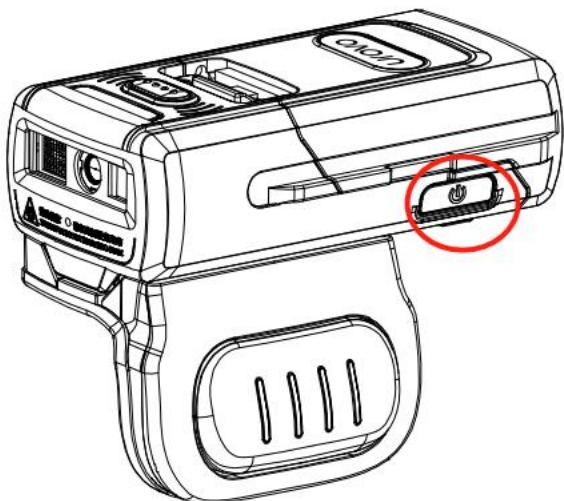

## 1.8 Direct Charger installation instructions

Insert the bottom of the SR5600 into the charger until it clips into place. Connect the Type-C interface at the end of the charger with the USB cable and Power adaptor. Normal charging starts when the indicator light indicates that the red light is always on.

### 1.8.1 Powering ON/OFF

Long-press the power button for 2 second to boot, for 3 second to turn off.

## 1.9 Bluetooth Communications

### 1.9.1 Introduction

This chapter provides information about the modes of operation and features available or Bluetooth communication between Ring Scanner and hosts. The chapter also includes the parameters necessary to configure the SR5600.

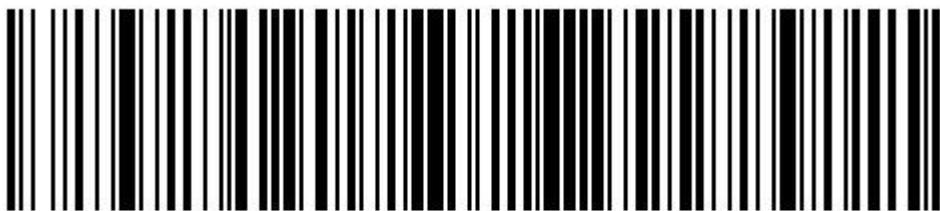

Scan a factory barcode to return all features to default values. See [page10](#).

Scan a version barcode to check the version number of the scanner. See [page10](#).

### 1.9.2 Bluetooth Connection Modes

The SR5600 Ring Scanner can connect to a host computer using the following Bluetooth modes, scan to switch the connection mode you need:

**Human Interface Device(\*HID MODE)**

**Serial Port Profile(SPP MODE)**

**Low Energy(BLE MODE)**

### 1.9.3 Pairing Mode

Scan the following barcode to enter the pairing mode or release the connection.

### 1.9.4 Bluetooth Name Modifying

Generate the barcode to change the Bluetooth name, value = \$BT#SETSSID=M  
M: Bluetooth name of Ring Scanner SR5600.

## 1.10 Command Controlling in SPP Mode

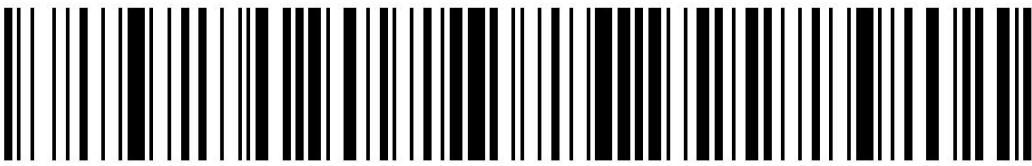

This setting enable can make scanner being control by HEX code.

Function	Item	Parameter	Description
%4006M%	SPP Control	00	Disable
		01	Enable

Scan the following barcode to enable command controlling .

Scan the following barcode to enable command controlling .(HEX: AA 04 40 06 00 42 BB )

#~%INS:%4006S00%~#

### 1.10.1 Indicator Controlling

Make sure the scanner in SPP Mode and enable the SPP Controlling Mode, then you can send HEX code to control LEDs / Beeper / Vibrate to respond as you wish.

#### Format 1:

AA	(Start)
04	(Length of instructs)
C8	(Code/default)
SUM	(R:0x01, G:0x02, B:0x04, BUZZ:0x08, Vibrate:0x10)
00~01	(OFF/ON)
XOR	(XOR result)Can be count by XOR tool or HEX Calculate.
BB	(END)

For example.

**Red LED Command(1 times):**

HEX.

ON: AA 04 C8 01 01 CC BB

OFF: AA 04 C8 01 00 CD BB

Start	length	value 1	value 2	value 3	XOR	End
AA	0x04	0xC8	0x01	0x01	CC	BB
AA	04	C8	R:0x01, G:0x02, B:0x04, BUZZ:0x 08, Vibrate :0x10	00:OFF 01:ON	XOR(len gth, C8, valu e2, value 3)	BB

**Green LED Command(1 times):**

HEX.

ON: AA 04 C8 02 01 CF BB

OFF: AA 04 C8 02 00 CE BB

Start	length	value 1	value 2	value 3	XOR	End
AA	04	C8	02	01	CF	BB
0xAA	0x04	0xC8	R:0x01, G:0x02, B:0x04, BUZZ:0x 08, Vibrate :0x10	0x00:OFF 0x01:ON	XOR(len gth, C8, valu e2, value 3)	0xBB

**Beeper Command(1 times)**

ON: AA 04 C8 08 01 C5 BB

OFF: AA 04 C8 08 00 C4 BB

Start	length	value 1	value 2	value 3	XOR	End
AA	04	C8	08	01	C5	BB
0xAA	0x04	0xC8	R:0x01, G:0x02, B:0x04, BUZZ:0x 08, Vibrate :0x10	00:OFF 01:ON	XOR(len gth, C8, valu e2, value 3)	0xBB

**Vibrate Command(1 times)**

HEX.

ON: AA 04 C8 10 01 DD BB

OFF: AA 04 C8 10 00 DC BB

Start	length	value 1	value 2	value 3	XOR	End
AA	0x04	0xC8	0x10	01	CC	BB
0xAA	0x04	0xC8	R:0x01, G:0x02, B:0x04, BUZZ:0x 08, Vibrate :0x10	0x00:OFF 0x01:ON	XOR(len gth, C8, val ue2, value 3)	0xBB

## Format 2:

AA	(Start)
06	(Length of instructions)
C0	(Code/default)
SUM	(R:0x01, G:0x02, B:0x04, BUZZ:0x08, Vibrate:0x10)
00~FF	(Blink/beep/vibrate times)
01~FE	(Duration)*10ms
02~FF	(Interval time)*10ms
XOR	(XOR result) Can be counted by XOR tool or HEX Calculate.
BB	(END)

### Example 1

HEX. AA 06 C0 **08** 03 0A 14 D3 BB (Means Beeping 3times totally, 100ms duration and wait 200ms between each beep).

Start	length	value 1	value 2	value 3	value 4	value 5	XOR	End
AA	06	C0	0x08	03	0A	14	D3	BB
0xAA	0x06	0xC0	R:0x01, G:0x02, B:0x04, <b>BUZZ:0x08,</b> Vibrate:0x10	times	Duration *10ms	Interval times*10 ms	XOR (length , value1 , value 2, value 3, value 4, value 5)	0xBB

### Example 2(Parallel)

HEX. AA 06 C0 **0A** 03 C8 C8 CF BB (Means **Green led & Beeper** reaction 3times totally, 2 seconds duration and wait 2second between each flash).

Start	length	value 1	value 2	value 3	value 4	value 5	XOR	End
AA	06	C0	0A	03	C8	C8	CF	BB
0xAA	0x06	0xC0	R:0x01, <b>G:0x02,</b> B:0x04, <b>BUZZ:0x08,</b> Vibrate:0x10  SUM=0x02+0x0 8=0xA	times	Duration *10ms	Interval times*10 ms	XOR (length , value1 , value 2, value 3, value 4, value 5)	0xBB

### Example 3(Parallel)

HEX. AA 06 C0 **1A** 03 64 C8 73 BB (Means **Green led & Beeper& Vibrator** reaction at the same

time, 3times totally, 1 seconds duration and wait 2second between each reaction).

Start	length	value 1	value 2	value 3	value 4	value 5	XOR	End
AA	06	C0	1A	03	64	C8	73	BB
0xAA	0x06	0xC0	R:0x01, G:0x02, B:0x04, BUZZ:0x08, Vibrate:0x10  SUM=0x02+0x08+0x10=0x1A	times	Duration *10ms	Interval times*10 ms	XOR (length , value1 , value 2, value 3, value 4, value 5)	0xBB

#### Example 4(Queue)

HEX: AA 06 C0 10 01 1E 00 C9 BB AA 06 C0 08 03 0A 14 D3 BB (Means Beeping 3times totally, 100ms duration and wait 200ms between each beep)+ vibrate 1 times before beeping

Start	length	value 1	value 2	value 3	value 4	value 5	XOR	End
AA	06	C0	10	01	1E	00	C9	BB
AA	06	C0	08	03	0A	14	D3	BB
0xAA	06	0xC0	R:0x01, G:0x02, B:0x04, BUZZ:0x08, Vibrate:0x10	times	Duration *10ms	Interval times*10 ms	XOR (length , value1 , value 2, value 3, value 4, value 5)	0xBB

## 1.10.2 Trigger Controlling

### Trigger ON:

HEX: AA 02 B1 B3 BB

### Trigger OFF:

HEX: AA 02 B0 B2 BB

## 1.10.3 Trigger Button Controlling

### Disable Trigger Button:

HEX: AA 02 A0 A2 BB

### Enable Trigger Button:

HEX: AA 02 A1 A3 BB

#### **1.10.4 Turn off all indications**

**Disable all indications:**

**HEX:** AA 04 01 07 01 03 BB

**Enable default indications:**

**HEX:** AA 04 01 07 00 02 BB

## 1.11 AIM/CharcterID Output

Scan the following barcode to receive the barcode type in front of barcode data. The barcode type corresponding format refer to *ISO-IEC 15424-2008* and [page 53](#) Programming references.

Function	Item	Parameter	Description
%5001M%	None	00	Disable
	AIM Code Output	01	Enable
	Character ID	02*	Enable

Scan the following barcode to disable the AIM / Character ID Output.

(HEX: AA 04 50 01 00 55 BB )

#~%INS:%5001S00%~#

Scan the following barcode to enable the AIM Code Output. (HEX: AA 04 50 01 01 54 BB )

#~%INS:%5001S01%~#

Scan the following barcode to disable the AIM Output. (HEX: AA 04 50 01 02 57 BB )

#~%INS:%5001S02%~#

## 2. Setup

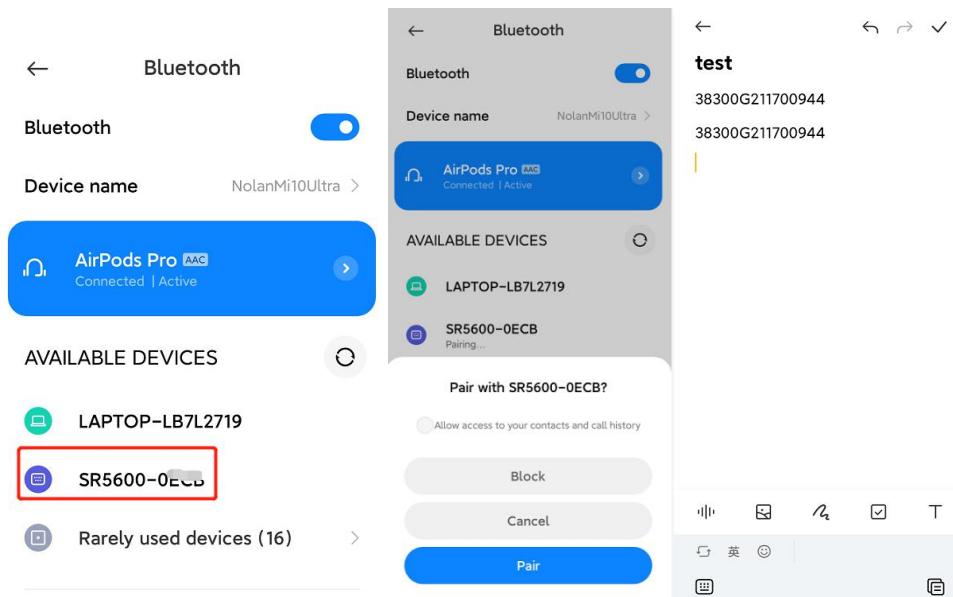

### HID Setup

#### 2.1. HID Bluetooth Connection to iOS/iPad/iPhone

1. Scan the barcode 'Pairing Mode' into connectable status.
2. Scan the HID MODE Barcode from this chapter.
3. Select Settings > General > Bluetooth(iOS)
4. Turn the iOS Bluetooth ON.
5. Select Bluetooth Settings and choose SR5600 from the list of discovered devices. The SR5600 displays as SR5600 - xxxx, where xxxx is the last four digits of the Mac address.

#### 2.2 HID Bluetooth Connection to Android

1. Scan the [barcode](#) 'Pairing Mode' into connectable status.
2. Scan the HID MODE [barcode](#) from this chapter.
3. Select Settings > Bluetooth(Android)
4. Turn the Android Bluetooth ON.
5. Select Bluetooth Settings and choose SR5600 from the list of discovered devices. The RS5100 displays as SR5600 - xxxxx, where xxxxx is the serial number.

**User-friendly operation-connect:**

\*Make sure the Android's NFC is on and Ring Scanner is power on, Tap NFC to quick pair.

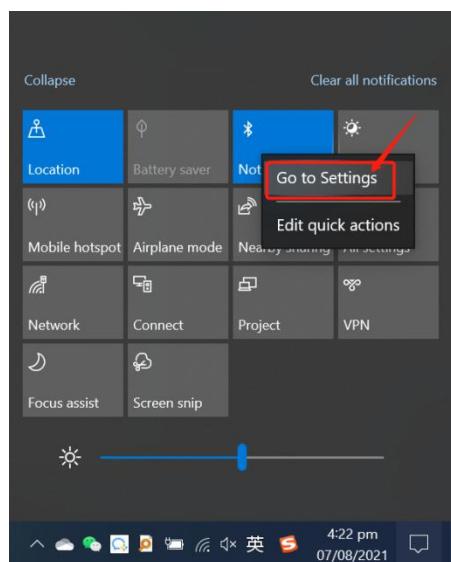

\*Scan a QR CODE(Bluetooth MAC of urovo's U2 wearable devices) to quick pair and connect.

## 2.3 HID Bluetooth Connection to Windows

To start the connection process aim the SR5600 at about 7" (18 cm) away from the computer screen and scan the [barcode](#) of the Pairing Mode.

The SR5600 Scan LEDs start flashing blue indicating that the SR5600 is attempting to establish connection with the computer. The following notifications display upon successful connection.

1. Scan the [barcode](#) 'Pairing Mode' into connectable status.
2. Scan the HID MODE [barcode](#) from this chapter.

## 4. Symbologies

This chapter describes symbology features and provides programming barcodes for selecting these features.

To set feature values, scan a single barcode or a short barcode sequence. The settings are stored in non-volatile memory and are preserved even when the SR5600 powers down.

### SPP Command Format:

Code 128 Setting:

Start	length	value 1	value 2	value 3	XOR	End
AA	0x04	0x08	0x01	0x00	0D	BB

HEX:'AA 04 08 01 00 0D BB' to disable Code128 encoding.

Start	length	value 1	value 2	value 3	XOR	End
AA	0x04	0x08	0x01	0x01	0C	BB

HEX:' AA 04 08 01 01 0C BB' to enable Code128 encoding.

\*The value 3 is the value following the character "S".

\*XOR value can be calculated by (length, value 1,value 2, value 3)

## Code 39

To enable or disable Code39, scan the appropriate barcode below.

\*Disable Code 39

#~%INS:%0602S01%~#
