1 Getting Started

1.1 About This Guide

This guide provides programming instructions for the 2D BARCODER READER. Users can configure the 2D BARCODER READER by scanning the programming barcodes included in this manual.

1.2 Barcode Scanning

Powered by area-imaging technology and 2D BARCODER READER patented “Hercules” technology, the 2D BARCODER READER features fast scanning and decoding accuracy. Barcodes rotated at any angle can still be read with ease. When scanning a barcode, simply center the aiming dot/beam or pattern projected by the 2D BARCODER READER over the barcode.

1.3 Factory Defaults

Scanning the following barcode can restore the engine to the factory defaults.

Note: Use this feature with discretion.

0D0100.

Restore All Factory Defaults

2 Communication Interfaces

The 2D BARCODER READER provides a TTL-232 interface and a USB interface to communicate with the host device. The host device can receive scanned data and send commands to control the engine or to access/alter the configuration information of the engine via the TTL-232 or USB interface.

2.1 TTL-232 Interface

Before using Serial Communication interface, scanner must be configured as 232 interface.

091804.

232 Interface

Serial communication interface is usually used when connecting the engine to a host device (like PC, POS). However, to ensure smooth communication and accuracy of data, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device.

The serial communication interface provided by the engine is based on TTL-level signals. TTL-232 can be used for most application architectures. For those requiring RS-232, an external conversion circuit is needed. The conversion circuit is available only to some models.

Default serial communication parameters are listed below. Make sure all parameters match the host requirements.

Parameter	Factory Default
Serial Communication	Standard TTL-232
Baud Rate	115200
Parity Check	None
Data Bits	8
Stop Bits	1
Hardware Flow Control	None

2.2 Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the Host requirements.

0607023.

2400

0607024.

4800

0607025.

9600

0607026.

19200

0607027.

38400

0607028.

57600

0607029.

115200 (default)

2.3 Data Bit & Parity Check& Stop Bit

0607032.

None Parity /8 Data Bits/1 Stop Bit(default)

0607035.

Even Parity /8 Data Bits/1 Stop Bit

0607038.

Odd Parity /8 Data Bits/1 Stop Bit

2.4 USB HID-KB

When you connect the engine to the Host via a USB connection, you can enable the **USB HID-KB** feature by scanning the barcode below. Then engine's transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

091809.

USB HID-KB

2.5 USB Country Keyboard Types

Keyboard layouts vary from country to country. The default setting is U.S. keyboard, and only U.S. keyboard is supported now.

2.6 Convert Case

Scan the appropriate barcode below to convert barcode data to your desired case.

060D020.

No Case Conversion (default)

060D021.

Convert All to Upper Case

060D022.

Convert All to Lower Case

Example: When the **Convert All to Lower Case** feature is enabled, barcode data “AbC” is transmitted as “abc”.

2.7 USB COM Port Emulation

If you connect the engine to the Host via a USB connection, the **USB COM Port Emulation** feature allows the Host to receive data in the way as a serial port does. A driver is required for this feature.

060500130.

USB COM Port Emulation

3 General Configuration

3.1 Trigger Mode

If the Trigger Mode is enabled, you could activate the scanner by providing an external hardware trigger, or using a serial trigger command. When in manual trigger mode, the scanner scans until a barcode is read, or until the hardware trigger is released. When in serial mode, the scanner scans until a barcode has been read or until the deactivate command is sent.

091A00.

Trigger Mode(default)

3.2 Presentation Mode

This set the scanner to work in Presentation mode.

090901.

Presentation Mode

3.3 Cell Phone Mode

If the Cell Phone Mode is enabled, the engine activates a special capturing image and illumination session.

If you want to enable Cell Phone reading in Trigger Mode, please scan below barcode:

091B00.

Trigger Mode with Cell Phone reading

If you want to enable Cell Phone reading in Presentation Mode, please scan below barcode:

4.1 General Configuration

090200.

Add CR

090202.

Add LF

090300.

Add CRLF

090201.

Add TAB

4.2 Add Prefix

080400.

Set Custom Prefix

0D0400.

Save

0D0500.

Not Save

To set a customer prefix, scan the “Set Custom Prefix” barcode and the numeric barcodes which representing the hexadecimal values of a desired prefix, and then scan the “Save” barcode. Refer to Appendix 2: ASCII Table for hexadecimal values of characters.

Example: Set the custom Prefix to “ODE”

1. Check the hex values of “ODE” in the ASCII Table. (“ODE”: 4F, 44, 45)
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “9”, “9”, “4”, “F”, “4”, “4”, “4” and “5” in Appendix 5 .
4. Scan the **Save** barcode.

4.3 Add Suffix

080500.

Set Custom Suffix

0D0400.

Save

0D0500.

Not Save

To set a customer suffix, scan the “Set Custom Suffix” barcode and the numeric barcodes which representing the hexadecimal values of a desired suffix, and then scan the “Save” barcode. Refer to Appendix 4: ASCII Table for hexadecimal values of characters.

Example: Set the custom Suffix to “ODE”

1. Check the hex values of “ODE” in the ASCII Table. (“ODE”: 4F, 44, 45)
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “9”, “9”, “4”, “F”, “4”, “4”, “4” and “5” in Appendix 5 .
4. Scan the **Save** barcode.

4.4 Clear All Prefix and Suffix

080404;080507.

Clear all prefix and suffix (default)

5 Symbologies

5.1 General Settings

Enable/Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the engine will not be able to read any non-programming barcodes except the programming barcodes.

0201001.

Enable All Symbologies

0201000.

Disable All Symbologies

5.2 1D Symbologies

5.2.1 Code 128

Restore Factory Defaults

020A00.

Restore the Factory Defaults of Code 128 (default)

Enable/Disable Code 128

020A011.

Enable Code 128 (default)

020A010.

Disable Code 128

Message Length

Message length can be set to the maximum value or minimum value. The value between the maximum and the minimum is valid.

The maximum value and minimum value can be set using “Programming Command”. Please check the programming command guide for the detail.

Code 128 max length command: 020A03. The parameter of this command can be set from min to 90.

Code 128 min length command: 020A02. The parameter of this command can be set from 0 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command:

Max: 020A0325.

Min: 020A0210.

5.2.2 EAN-8

Restore Factory Defaults

Restore the Factory Defaults of EAN-8 (default)

Enable/Disable EAN-8

Enable EAN-8 (default)

Disable EAN-8

Transmit Check Digit

EAN-8 is 8 digits in length with the last one as its check digit used to verify the accuracy of the data.

Transmit EAN-8 Check Digit (default)

Do Not Transmit EAN-8 Check Digit

Add-On Code

An EAN-8 barcode can be augmented with a two-digit or five-digit add-on code on code to form a new one. In the examples below, the part surrounded by blue dotted line is an EAN-8 barcode while the part circled by red dotted line is add-on code.

0214031.

Enable 2-Digit Add-On Code

0214030.

Disable 2-Digit Add-On Code (default)

0214041.

Enable 5-Digit Add-On Code

0214040.

Disable 5-Digit Add-On Code (default)

Add-On Code Required

0214051.

EAN-8 Add-On Code Required

0214050.

EAN-8 Add-On Code Not Required (default)

ENA/JAN-8 Addenda Separator

When this feature is enabled, there is a space between barcode and addenda. When this feature is disabled, there is no space.

0214061.

Enable EAN/JAN-8 Addenda Separator (default)

0214060.

Disable EAN/JAN-8 Addenda Separator

5.2.3 EAN-13

Restore Factory Defaults

021300.

Restore the Factory Defaults of EAN-13 (default)

Enable/Disable EAN-13

0213011.

Enable EAN-13 (default)

0213010.

Disable EAN-13

Transmit Check Digit

0213021.

Transmit EAN-13 Check Digit (default)

0213020.

Do Not Transmit EAN-13 Check Digit

Add-On Code

0213031.

Enable 2-Digit Add-On Code

0213030.

Disable 2-Digit Add-On Code (default)

0213041.

Enable 5-Digit Add-On Code

0213040.

Disable 5-Digit Add-On Code (default)

Add-On Code Required

0213051.

EAN-13 Add-On Code Required

0213050.

EAN-13 Add-On Code Not Required (default)

ENA/JAN-13 Addenda Separator

When this feature is enabled, there is a space between barcode and addenda. When this feature is disabled, there is no space.

0213061.

Enable ENA/JAN-13 Addenda Separator (default)

0213060.

Disable ENA/JAN-13 Addenda Separator

ISBN Translate

When enable this feature and is scanned, ENA13 Book land symbols are translated into their equivalent ISBN number format.

0213071.

Enable ISBN Translate

0213070.

Disable ISBN Translate (default)

5.2.4 UPC-E

Restore Factory Defaults

021200.

Restore the Factory Defaults of UPC-E (default)

Enable/Disable UPC-E0/E1

0212011.

Enable UPC-E0 (default)

0212010.

Disable UPC-E0

0212021.

Restore the Factory Defaults of Matrix 2 of 5 (default)

Enable/Disable Matrix 2 of 5

0208011.

Enable Matrix 2 of 5

0208010.

Disable Matrix 2 of 5 (default)

Message Length

Message length can be set to the maximum value, minimum value. The value is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Matrix 2 of 5 max length command: 020803. The parameter of this command can be set from min to 80.

Matrix 2 of 5 min length command: 020802. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02080325.

Min: 02080210.

5.2.8 Industrial 2 of 5

Restore Factory Defaults

020600.

Restore the Factory Defaults of Industrial 2 of 5 (default)

Enable/Disable Industrial 2 of 5

0206011.

Enable Industrial 2 of 5

0206010.

Disable Industrial 2 of 5 (default)

Message Length

Message length can be set to the maximum value, minimum value. The value is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Industrial 2 of 5 max length command: 020603. The parameter of this command can be set from min to 48.

Industrial 2 of 5 min length command: 020602. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02060325.

Min: 02060210.

5.2.9 Code 39

Enable MSI

020E010.

Disable MSI (default)

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

MSI max length command: 020E04. The parameter of this command can be set from min to 48.

MSI min length command: 020E03. The parameter of this command can be set from 4 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 020E0425.

Min: 020E0310.

MSI Check Character

020E020.

Validate Type 10, No Transmit (Default)

020E021.

Validate Type 10, Transmit

020E022.

Validate 2 Type 10 Characters, No Transmit

020E023.

Validate 2 Type 10 Characters, Transmit

020E024.

**Validate Type 11 Then Type 10 Character,
No Transmit**

020E025.

**Validate Type 11 Then Type 10 Characters,
Transmit**

020E026.

Disable MSI Check Characters

Restore the Factory Defaults of QR Code (default)

Enable/Disable QR Code

0237011.

Enable QR Code (default)

0237010.

Disable QR Code

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum is valid.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

QR max length command: 023703. The parameter of this command can be set from min to 7089.

QR min length command: 023702. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02370325.

Min: 02370210.

5.3.4 Data Matrix

Restore Factory Defaults

023600.

Restore the Factory Defaults of Data Matrix (default)

Enable/Disable Data Matrix

0236011.

Enable Data Matrix (default)

0236010.

Disable Data Matrix

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Data Matrix max length command: 023603. The parameter of this command can be set from min to 3116.

Data Matrix min length command: 023602. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02360325.

Min: 02360210.

5.3.5 Maxi code

Restore Factory Defaults

023400.

Restore the Factory Defaults of Maxi code (default)

Enable/Disable Maxi code

0234011.

Enable Maxi code

0234010.

Disable Maxi code (default)

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Maxi Code max length command: 023403. The parameter of this command can be set from min to 150.

Maxi Code min length command: 023402. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02340325.

Min: 02340210.

5.3.6 Aztec

Restore Factory Defaults

023300.

Restore the Factory Defaults of Aztec (default)

Enable/Disable Aztec

0233011.

Enable Aztec

0233010.

Disable Aztec (default)

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Aztec max length command: 023306. The parameter of this command can be set from min to 3832.

Aztec min length command: 023305. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02330625.

Min: 02330510.

5.3.7 Hanxin

Restore Factory Defaults

023800.

Restore the Factory Defaults of Hanxin (default)

Enable/Disable Hanxin

0238011.

Enable Hanxin

0238010.

Disable Hanxin (default)

Message Length

Message length can be set to the maximum value, minimum value. The data is valid between the maximum and the minimum.

The maximum value and minimum value can be set using Programming command. Please check the programming command guide for the detail.

Hanxin max length command: 023803. The parameter of this command can be set from min to 7833.

Hanxin min length command: 023802. The parameter of this command can be set from 1 to max.

Example: Set the Barcode Message length of the minimum value is 10; the maximum value is 25.

Programming command

Max: 02380325.

Min: 02380210

5.4 Postal Symbologies

Restore the Factory Defaults of China Postal Code (default)

Enable/Disable China Postal Code

0218011.

Enable China Postal Code

0218010.

Disable China Postal Code (default)

5.4.2 Telepen

Restore Factory Defaults

021000.

Restore the Factory Defaults of Telepen (default)

Enable/Disable Telepen

0210011.

Enable Telepen

0210010.

Disable Telepen (default)

6 Serial Commands

The serial programming commands can be used in place of the programming bar codes. Both the serial commands and the programming bar codes will program the scanner. For complete descriptions and examples of each serial programming command, refer to the corresponding programming bar code in this manual.

The device must be set to an TTL-RS232 interface. The following commands can be sent via a PC COM port using terminal emulation software.

6.1 Function Commands

The serial function commands have the following formation:

STX + CMD(see following table) + EXT

Function	Command	Formation
Trigger	\xF4	\x02\xF4\x03
Untrigger	\xF5	\x02\xF5\x03

6.2 Menu Commands

The menu commands have the following syntax:

\x02\xF0\x03 + Menu Number + Setting Value + Character

Character consists of three characters. The details refer to following table.

Character	Function
.	Store in ROM
!	Store in RAM
?	Query the current setting
*	Return the valid setting range

Example:

Action	Send Commands	Response
Set the unit default	\x02\xF0\x030D0100.	0D0100 [ACK].
Set unit mid-level illumination 1 (saved in ROM)	\x02\xF0\x038002001.	8002001[ACK].
Set unit mid-level illumination 1 (saved in RAM)	\x02\xF0\x038002001!	8002001[ACK]!
Query the current illumination level	\x02\xF0\x03800200?.	8002000[ACK].
Query the range value of barcode scanning delay	\x02\xF0\x03080B08*.	080B080-30000[ACK].

6.3 Menu number

Function	Details	Menu Number	Setting Value
Restore All Factory Defaults	Activate Defaults	0D0100	NA
Interface	232 Interface	091804	NA

7 Appendix

7.1 Appendix 1: AIM ID Table

Symbology	AIM ID	Remark
EAN-13	J E0	Standard EAN-13
	J E3	EAN-13 + 2/5-Digit Add-On Code
EAN-8	J E4	Standard EAN-8
	J E4... E1...	EAN-8 + 2-Digit Add-On Code
	J E4... E2...	EAN-8 + 5-Digit Add-On Code
UPC-E	J E0	Standard UPC-E
	J E3	UPC-E + 2/5-Digit Add-On Code
UPC-A	J E0	Standard UPC-A
	J E3	UPC-A + 2/5-Digit Add-On Code
Code 128	J C0	Standard Code 128
GS1-128 (UCC/EAN-128)	J C1	FNC1 is the character right after the start character
AIM-128	J C2	FNC1 is the 2nd character after the start character
ISBT-128	J C4	
Interleaved 2 of 5	J I0	No parity check
	J I1	Transmit check digit after parity check
	J I3	Do not transmit check digit after parity check
ITF-6	J I1	Transmit check digit
	J I3	Do not transmit check digit
ITF-14	J I1	Transmit check digit
	J I3	Do not transmit check digit
Industrial 2 of 5	J S0	Not specified
Standard 2 of 5	J R0	No parity check
	J R8	One check digit, MOD10; do not transmit check digit
	J R9	One check digit, MOD10; transmit check digit
Code 39	J A0	Transmit barcodes as is; Full ASCII disabled; no parity check
	J A1	One check digit, MOD43; transmit check digit
	J A3	One check digit, MOD43; do not transmit check digit
	J A4	Full ASCII enabled; no parity check
	J A5	Full ASCII enabled; transmit check digit
	J A7	Full ASCII enabled; do not transmit check digit
Codabar	J F0	Standard Codabar
	J F2	Transmit check digit after parity check
	J F4	Do not transmit check digit after parity check

Symbology	AIM ID	Remark
Code 93	JG0	Standard Code 93
Code 11	JH0	One check digit MOD11; transmit check digit
	JH1	Two check digits, MOD11/MOD11; transmit check digit
	JH3	Do not transmit check digit after parity check
	JH9	No parity check
GS1-DataBar (RSS)	Je0	Standard GS1-DataBar
Plessey	JP0	Standard Plessey
MSI-Plessey	JM0	One check digit, MOD10; transmit check digit
	JM1	One check digit, MOD10; do not transmit check digit
	JM8	Two check digits
	JM9	No parity check
Matrix 2 of 5	JX0	Specified by the manufacturer
	JX1	No parity check
	JX2	One check digit, MOD10; transmit check digit
	JX3	One check digit, MOD11; do not transmit check digit
ISBN	JX4	Standard ISBN
ISSN	JX5	Standard ISSN
PDF417	JL0	Comply with 1994 PDF417 specifications
Data Matrix	Jd0	ECC000 - ECC140
	Jd1	ECC200
	Jd2	ECC200, FNC1 is the 1st or 5th character after the start character
	Jd3	ECC200, FNC1 is the 2nd or 6th character after the start character
	Jd4	ECC200, ECI included
	Jd5	ECC200, FNC1 is the 1st or 5th character after the start character, ECI included
	Jd6	ECC200, FNC1 is the 2nd or 6th character after the start character, ECI included
QR Code	JQ0	QR1
	JQ1	2005 version, ECI excluded
	JQ2	2005 version, ECI included
	JQ3	QR Code 2005, ECI excluded, FNC1 is the 1st character after the start character
	JQ4	QR Code 2005, ECI included, FNC1 is the 1st character after the start character
	JQ5	QR Code 2005, ECI excluded, FNC1 is the 2nd character after the start character
	JQ6	QR Code 2005, ECI included, FNC1 is the 2nd character after the start character
